HIGH-PERFORMANCE EXCAVATION IS NOW A REALITY.

Debris Removal Solutions is a non-destructive process to safely perform excavation services as an alternative to mechanical excavation with a high level of efficiency and productivity. It is capable of moving large volumes of material quickly capturing debris for later disposal or back-filling without creating environment issues.

ACCELERATING INSTALLATION, MAINTENANCE, AND REPAIR.

APPLICATIONS:

- Soil-to-Air Interfaces
- Electrical and Utility Line Locating
- Exposure of Buried Utilities and Piping
- Pipe Rack Excavation Support
- Potholing and Trenching Excavation
- Much More!

KEY BENEFITS:

- Safety: For workers and infrastructures
- Precision Digging: No disruption to surrounding soils and infrastructures
- No Mess: No water, mud, or slurry and excavated soil can be reused as backfill
- Versatility: A wide array of applications
- Cost-Effective: The speed, precision, and safety lower the cost of soil removal and replacement

WHAT IS DRY SUCTION EXCAVATION?

Dry suction excavation, also known as dry vacuum excavation or air excavation, is a non-destructive digging method that uses compressed air to dislodge and then vacuums soil, rather than water, for a cleaner, safer, and non-muddy result.

Ideal for safely exposing existing buried infrastructure like utilities, pipes, fiber optic lines, and precise digging in sensitive areas is required and where conventional excavation would cause damage or injury.

ABOUT DEBRIS REMOVAL SOLUTIONS

Debris Removal Solutions is able to provide turnkey services with Echo Maintenance (mechanical), Admiral Field Services (inspection), and Industrial Specialty Crafts (coatings/tapes/rap systems). We lead our industry with emergency call-out assistance, in-house support, and turnaround/project staffing from small to large. Our unique REP Methodology delivers on four key principles:

ONE CALL. DONE.

COST EFFECTIVE.

FAST RESPONSE.

ALWAYS SAFE.
